

S4 Table. Multivariable logistic regression models for *Toxoplasma gondii* seropositivity for cats of eight breeds separately as well as for all cats, regardless of breed. Odds ratio, 95% confidence interval, and P-value are shown.

Breed	≥ 1 year old	Male gender	Receiving raw meat	Outdoor access	Area under the receiver operating characteristic curve
Birman	3.73 (1.63–8.57), P=0.002	0.51 (0.31–0.86), P=0.011	2.58 (1.14–5.84), P=0.022		0.6620
British Shorthair					
Burmese			8.75 (1.08–70.70), P=0.042		0.6590
Korat					
Norwegian Forest Cat	4.14 (2.09–8.19), P=0.000			1.77 (1.01–3.10), P=0.046	0.6184
Ocicat					
Persian					
Siamese					
All cats	3.65 (2.40–5.53), P= 0.000		2.74 (1.88–3.99), P=0.000		0.6188
